

Dear Walmart, Central America Supplier:

A critical element to preserve the food safety and quality of our products is the cold chain. Ensuring all our products are storage and transported in the correct temperatures, is possible through the proper monitoring of the cold chain; for this, we **ask the use of 2 trackers/temperature data logger in each Walmart shipment**; one must be *Emerson GO Real-Time Tracker* (which is the priority brand and model) and a second Emerson Go Real-Time Tracker or one from the authorized device listed below. These trackers are required on every frozen, refrigerated, and controlled temperature product shipments inbound to our Central America food distribution centers and manufacturing plants.

The options are: 2 Emerson Go Real-Time Trackers, 1 Emerson Go Real-Time Tracker + 1 from de authorized list, 2 from de authorized list.

The benefit of using the **Emerson GO Real-Time Tracker** is that you will have visibility of the temperature from your origination point to Walmart's receiving dock, and very important, on any shipments that experience temperature excursions outside of the acceptable range, the device will provide an alert that can be communicated and allow the users take actions and reduce the total temperature excursion of the shipment.

Vendor: Emerson Cargo Solutions

Required tracker: GO Real-Time XL Tracker (ocean shipments)

GO Real-Time Tracker (air & over the road shipments)

To order, use one of these methods:

1. **Contact for new customers:** CargoSolutions@Emerson.com
2. **Contact for existing customers:** CargoOrders@Emerson.com
3. **Call:** 877-998-7299 Option 3

After you have reached out to the Cargo Solutions team, they will guide you on getting set up for training in Oversight, Emerson's cloud-based temperature monitoring portal. In Oversight, you will be required to program the trip to the corresponding PO, which is an integral part of the requirement so the temperature can be monitored in real time and receive the alerts in case of temperature excursions.

The other authorized temperature data logger you can use are:

This are the temperature data logger you can use as secondary or as primary and secondary, only if Emerson devices are not available in your region. Paper temperature data loggers are not accepted under any circumstances, no exceptions.

Other requirements:

- For long trips (30+ days) you must use an Emerson XL 4G/5G or Delta Long (up to 60 days or longer).
- The physical location and the serial numbers must be listed in the packing list.
- Make sure tracker/temperature data logger are settled to bring information (date/hour/temperature) in periods no longer than 1 hour (10 -15 minutes is ideal).
- The trackers/temperature data logger must be placed in the superior carton layer, not directly in the container walls or doors; if the load is at double pallet, the tracker/sensor must be placed in the superior pallet. Do not use excess of stretch film to secure it (these may interfere in the temperature record).
- Each tracker/temperature data logger must be identified with a note as below (page size):

Place the temperature data logger here.

Termógrafo
Temperature data logger

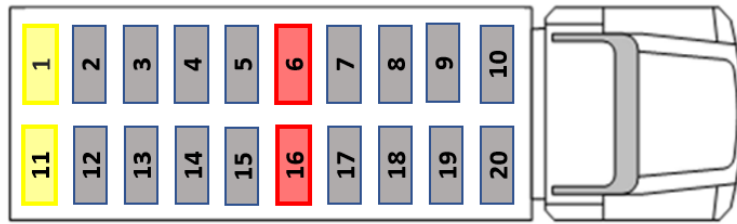

de serie: _____

“No tocar – No quitar – No apagar”

Este dispositivo registra la temperatura de la carga

- First tracker location: must be the Emerson GO Real-Time Tracker and need to be placed in the pallet next to the door (pallet #1 or #11 and if is at double pallet, in the #21 or #31).
- Second tracker/temperature data logger location: can be the Emerson GO Real-Time Tracker or one from authorized temperature data logger list and must be placed in the pallet in the middle of the truck (#6 or #16 and if is at double pallet in the #26 or #36).

Location Emerson Go
Real-Time Tracker
